## SUMMARY

Backend-focused Full-Stack Developer and Team Lead delivering production systems across Lebanon, Saudi Arabia, and the UAE. Strong in Laravel, React, Node.js, Python, REST APIs, and MySQL, with hands-on experience building AI-integrated products: LLM-powered platforms, AI agents, ML inference pipelines, and real-time speech-to-sign translation. Comfortable leading developers, owning architecture, and shipping business-critical SaaS, ERP, and POS applications, using modern AI-assisted development tools to accelerate delivery without sacrificing quality.

## PROFESSIONAL EXPERIENCE

### Founder / Lead Engineer — Deaference

*Speech-to-Sign Platform | Jul 2026 – Present*

- Architected a real-time speech-to-sign pipeline: mic capture → speech recognition → text normalization → confidence-scored phrase matching → animation queue → Three.js 3D avatar rendering with quaternion animation tracks.
- Designed the ML roadmap for true semantic sign translation, covering temporal modeling, pose/hand/face articulators, gloss-level supervision, and latency/compute constraints — cleanly separated from the deterministic MVP pipeline.
- Built modular architecture so generative animation models can replace the lookup engine without rewriting the capture, matching, or rendering layers.

### Full-Stack Developer / Team Lead — AFKAR ALBARMAJAH

*KSA (Remote) | Jan 2025 – Mar 2026*

- Led a team of developers building full-stack systems, including atcc-ksa.com for AFKAR AL-TATWEER.
- Designed, developed, and maintained scalable applications with Laravel, React, and MySQL.
- Managed project planning, code reviews, task distribution, and production deployments.
- Administered enterprise systems including SQL databases, internal platforms, and Active Directory.

### Full-Stack Developer / Co-Founder — IMAA

*Lebanon | Jun 2023 – Jan 2026*

- Developed and deployed custom POS and Invoice Management systems for clients across Lebanon, including a live system for a UAE SNS company.
- Built and maintained company websites, including swisslifelb.com, using Laravel, PHP, and MySQL.
- Designed relational databases, implemented auth and RBAC, and managed hosting, deployments, and client support.

### Software Technician — CLICKONCE

*Lebanon | Oct 2024 – Jan 2026*

- Performed software troubleshooting, maintenance, and client IT support.

## PROJECTS

### NexusMG — AI-Powered Developer Readiness Platform

*GitHub*

- Built an AI system (React, FastAPI, LLMs) evaluating developers via CV, GitHub, LinkedIn, and interviews — agent-style pipelines orchestrating multi-source analysis into a unified readiness score, with role-based dashboards and AI-generated feedback reports.

### ERP & Accounting System — IMAA

- Full accounting workflows for sales, purchases, and financial reporting; role-based access control and modular Laravel/MySQL architecture.

### POS System for Retail Clients — IMAA

*GitHub*

- Live POS handling sales, products, transactions, and reporting; REST APIs with database performance optimized for live operations.

## TECHNICAL SKILLS

**Backend:** PHP, Laravel, Node.js, Express, NestJS, Python, FastAPI, Django, Flask, REST APIs, RBAC/Auth (JWT, Sanctum)

**AI / ML:** LLM integration (OpenAI/Anthropic APIs), AI agents & orchestration, prompt engineering, ML inference pipelines, speech-to-text, model-serving APIs, dataset preprocessing, AI-assisted development (Claude Code, Copilot, Cursor)

**Frontend:** React, Next.js, Angular, Vue, TypeScript, Tailwind, Bootstrap, Three.js

**Databases & DevOps:** MySQL, MariaDB, MongoDB, Supabase, Docker, Git/GitHub, Nginx, AWS (EC2/S3), Postman

**Languages:** Arabic (Native), English (Fluent), Spanish (Beginner)

## EDUCATION

### B.S. Computer Science — Lebanese International University

*Aug 2020 – Feb 2024*

### Full-Stack Web Development — The Digital Hub (UNRWA)

*Jan 2026 – May 2026*
